THE **PROFITABLE PROGRAMMER** ROADMAP

FUNDAMENTALS OF PYTHON

Learn the basics of python but focusing specially on web app development. Meaning instead of doing boring math problems, work on making simple web apps..

WEB DEVELOPMENT

If you build a web app or two with a python web framework like Django or Flask... You should be ready to move onto the 3rd optional stage.
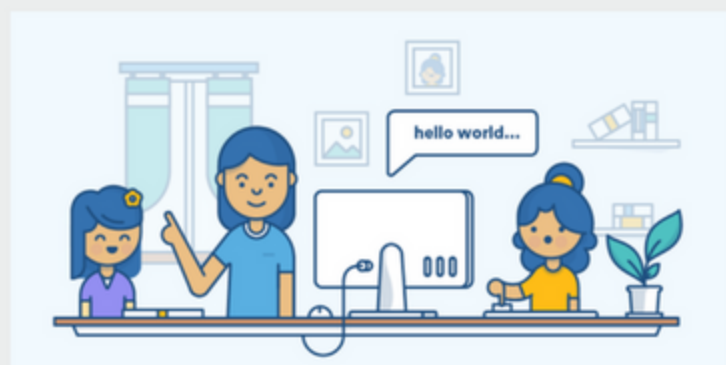

COACHING Clients (OPTIONAL BUT STRONGLY RECOMMENDED)

This is your ultimate shortcut to starting to freelance. This will help you EARN while you are learning. This will help you become a developer in MONTHS, not years.

FREELANCING

This is the most exciting part. This is where you go from the client attraction stage to making money with coding & build apps with python. The sheet below has The Python Client-Getting Blueprint...

THE PYTHON CLIENT-GETTING BLUEPRINT 🐍

CLIENT ATTRACTION STAGE (PRE-GAME)

Find someone with burning python problem > **Come up with a way to solve it** > **Propose solution to client** > **Research, schedule, and get on that damn call**

LAND THE CLIENT STAGE

Qualify client > **Shoot over project mockup + proposal** > **7 day proposal follow up (optional)** > **Send project agreement + sign NDA** > **Send project invoice (or charge hourly)**

PYTHON APP BUILDING STAGE (PARTY)

Map out what's needed > **Plain English** > **Confirm Assumptions** > **Start Coding** > **Client Feedback**

ONCE IT'S ALL OVER STAGE (AFTER PARTY)

Parting words with client > **Project stacking** > **Testimonial collection** > **Proof stacking**
